

## Handbook of Chemical Engineering Volume 2

Filesize: 7.98 MB

### Reviews

*This is an incredible ebook which i actually have ever go through. This can be for those who statte that there had not been a really worth reading. I am just quickly can get a delight of reading a published book.*

*(Ms. Colleen Ziemann V)*

## HANDBOOK OF CHEMICAL ENGINEERING VOLUME 2

[DOWNLOAD](#)

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 232 pages. Dimensions: 9.7in. x 7.4in. x 0.5in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1922 edition. Excerpt: . . . relative efficiencies of catalysts for ammonia synthesis. Actually, such a catalyst is not employed in technical synthesis owing to its great sensitivity to catalyst poisons. Catalytic agents composed of iron admixed with suitable promoters are preferred to the uranium carbide, although catalytically less efficient, owing to their greater resistivity to traces of foreign gases such as carbon monoxide or sulphur compounds. 1 (Similar observations on the equilibrium factors in other catalytic reactions may be obtained in Rmnser. and TAYLOR, loc cit. pp. 83, 91, 101, 162, 237, 302. ) The measurement of the reaction velocity is relatively simple in the case of homogeneous catalytic reactions, since the concentrations of the several constituents and the course of the reaction can generally be readily ascertained. With heterogeneous reactions the problem is more complex since the several magnitudes required are not capable of precise statement. In illustration of the problem let it be assumed that a given volume of gas or liquid,  $V$ , be forced through a bed of granular contact material,  $v$ , per unit of time. The ratio  $Vv$  may be termed the space-velocity (S. V. ) of the process and is an important magnitude technically since its size determines, in part, the dimensions of the plant required for a given output. In passage through the catalyst space the reactants substances will attain more or less to the equilibrium concentrations according as the rate of passage be slow or rapid. If the fractional conversion of...
