Date :2008-1-26. This book systematically describes high-throughput screening, genetic selection and fingerprinting analysis of the three enzymes used in various areas of activity detection methods. covering activity in recent years has made the most of the test results. Context of each chapter clear, or introduce a universal detection method (such as the agar plate method, chemical complementary method, etc.) in a variety of enzyme activity detection, or cited for an important class of enzymes (such as redox enzyme, protease, etc.) of a variety of detection methods. The book's introduction on the activity tests in great detail, including its principles, processes, steps, advantages and disadvantages, etc. and gives a number of related documents, to facilitate the reader in-depth inspection. Book compiled by the senior experts in all fields from the corresponding section of distinguished scholars or well-known companies to write more content, multi-disciplinary, multi-angle presentation of the various activity detection method. The most noteworthy, the book with a chapter devoted to the industrial look of the prospect of detection methods, which engage in academic research and industrial applications are of great benefit for researchers. For in enzyme research, drug development, biocatalysis, directed evolution and other related areas of research, the book is an indispensable tool. At the same time, the book for chemists, biochemists, and bio-technology workers are also great reference value. Contents: Introduction The first part of the activity detection: high-throughput screening Part II: Genetic Selection Part III: fingerprint analysis of enzyme activity detected in other areas of the reference book on how to use the first part of high-throughput screening of a color change according to the quantitative detection of...
